

Bootstrap

DAY 5 - workshop

XPLORICA

Bootstrap

- Most Popular Frontend framework
- For building responsive sites
- Bootstrap, originally named Twitter Blueprint, was developed by Mark Otto and Jacob Thornton at Twitter as framework to encourage consistency across internal tools.

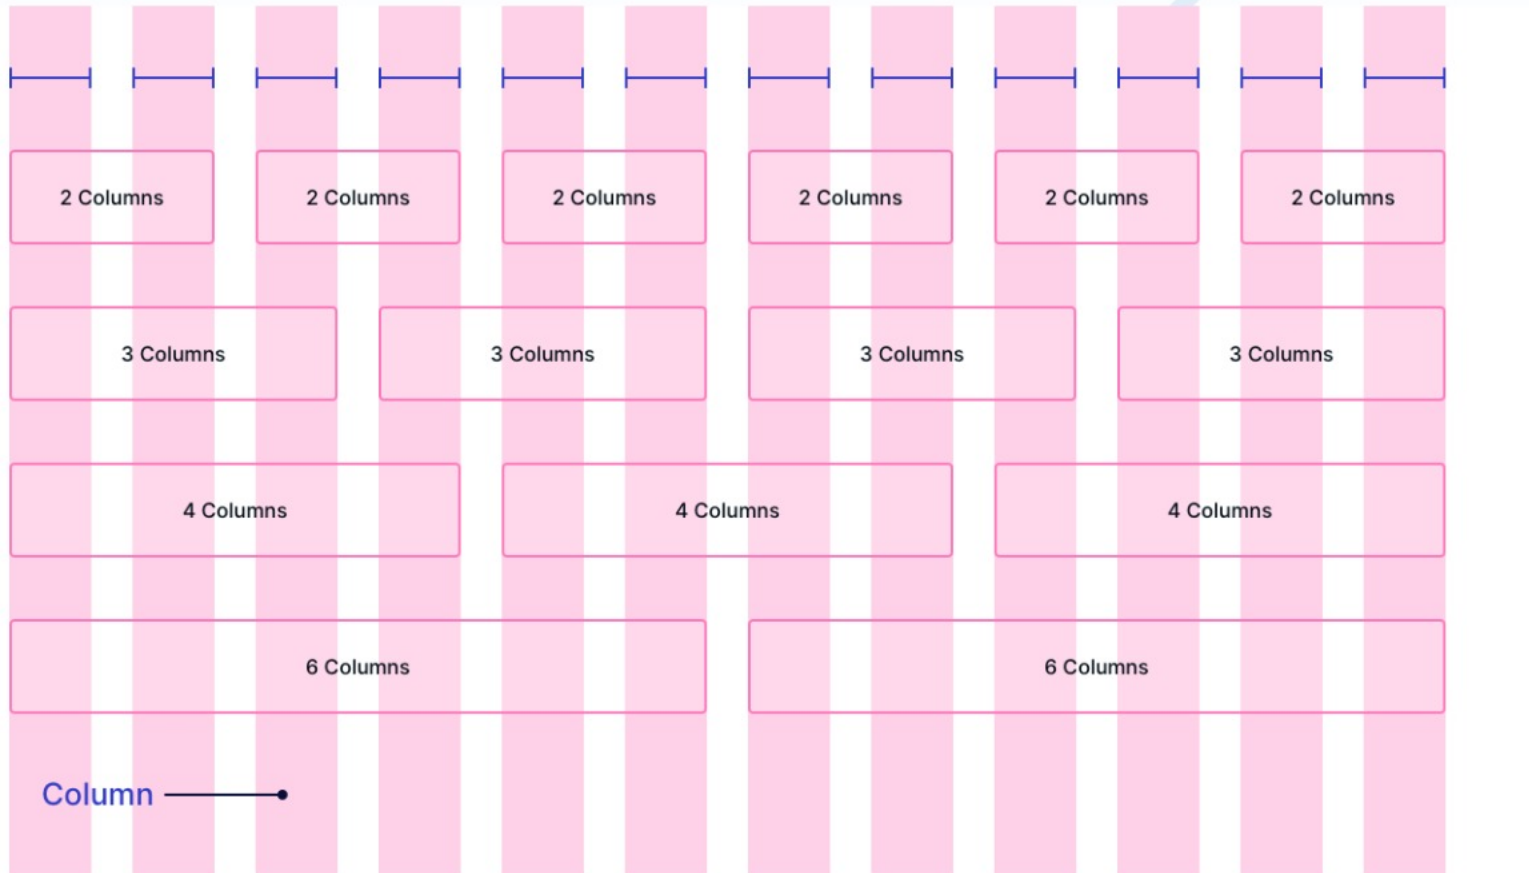

Bootstrap

- Bootstrap(Grid System + Classes + Components)

Bootstrap

- Grid System - for responsiveness

Bootstrap

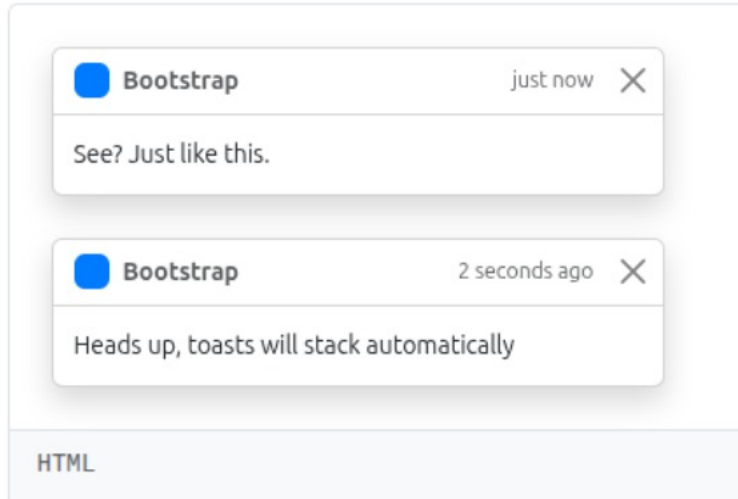

- Classes
- Example : container-fluid class for making image Responsive

```
<div class="container-fluid"><div>
```

Bootstrap

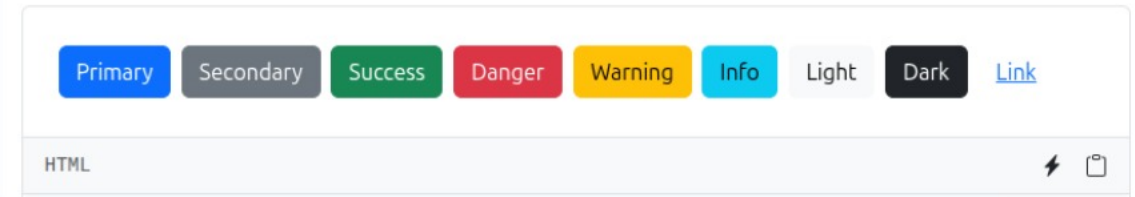

- Components (<https://getbootstrap.com/docs/5.3/components/>)
- Example :

You can stack toasts by wrapping them in a toast container,

Buttons
Cards
Pagination
Accordion
Carousel
Navs
Tabs
Breadcrumbs
Pagination
And many more....

Bootstrap includes several button variants, each serving its own semantic purpose, with a few extras thrown in for more control.

When using card groups with footers, their content will automatically line up.

Image cap	Image cap	Image cap
Card title This is a wider card with supporting text below as a natural lead-in to additional content. This content is a little bit longer.	Card title This card has supporting text below as a natural lead-in to additional content.	Card title This is a wider card with supporting text below as a natural lead-in to additional content. This card has even longer content than the first to show that equal height action.

Bootstrap

- Bootstrap Documentation is the best place for reference (<https://getbootstrap.com/docs/>)
- Refer to official documentation for class names and prebuilt components to save development time.
- If the requirement doesn't include custom design, use predefined components directly — they are fast and consistent.
- However, when a custom design is required, predefined components often fail because custom CSS may override their styles.
- In such cases, use only the grid system (for layout and responsiveness) while implementing your own custom design.

- However, when a custom design is required, predefined components often fail because custom CSS may override their styles.
- In such cases, use only the grid system (for layout and responsiveness) while implementing your own custom design.

Bootstrap

- Get Started
 1. CDN (attach faster to website and faster download)
reducing load time and delivering content from the nearest server
 2. Download and Attach

Bootstrap

- Earlier solution: Developers used to create separate websites for mobile and desktop, e.g.
facebook.com → for desktop users
m.facebook.com → for mobile users
- **Problem:** With the rise of modern devices like tablets, iPads, and smart TVs, it became difficult to design and maintain separate versions for every device.
- **Modern solution:** The concept of responsive web design was introduced — websites that automatically adjust their layout and elements according to the screen size and device type.
- **Result:** One single website can now work perfectly on desktops, mobiles, and tablets using CSS media queries and flexible grid systems.

Bootstrap

- Bootstrap Grid System

1. Breakpoints
2. Containers
3. Rows
4. Columns

- Whiteboard Discussion Shareable link:

<https://excalidraw.com/#json=g3797iEdcqmlrzJdk9lgq,hzt7WbOnQYygTKpcZ346oA>

Bootstrap

1. Breakpoints

Breakpoint	Class infix	Dimensions
Extra small	<i>None</i>	<576px
Small	sm	≥576px
Medium	md	≥768px
Large	lg	≥992px
Extra large	xl	≥1200px
Extra extra large	xxl	≥1400px

Bootstrap

- Next Day....

Bootstrap

CSS Media Queries
